ABSTRACT:

This bachelor's thesis called "The Environmental Education in the Basic School of Červené Pečky" points out the possibilities how to realize the environmental education in a basic school. Elementary environmental and pedagogical notions, teaching methods, and reasons for the environmental education are clarified in the theoretical part.

The practical part is divided into two projects which deal with water. The first project works with elementary school pupils and this one should enrich pupils' knowledge and experience with water. The junior pupils in the second project learn about ponds nearby. The practical part comes out of the research which was accomplished by means of a questionnaire.

The emphasis in both parts is put on the progress in pupils' relation to nature when using practical environmental activities. The aim of this thesis is to increase the pupils' interest in nature, to discover natural relations and the laws of nature, to recognize the familiar environment and to create a positive attitude to it, last but not least to understand the importance of the environment for us and for next generations.

KEY WORDS:

The environmental education, pupils, water, practical activities, project
